

Task Dependencies

Kevin Jones

@kevinrjones

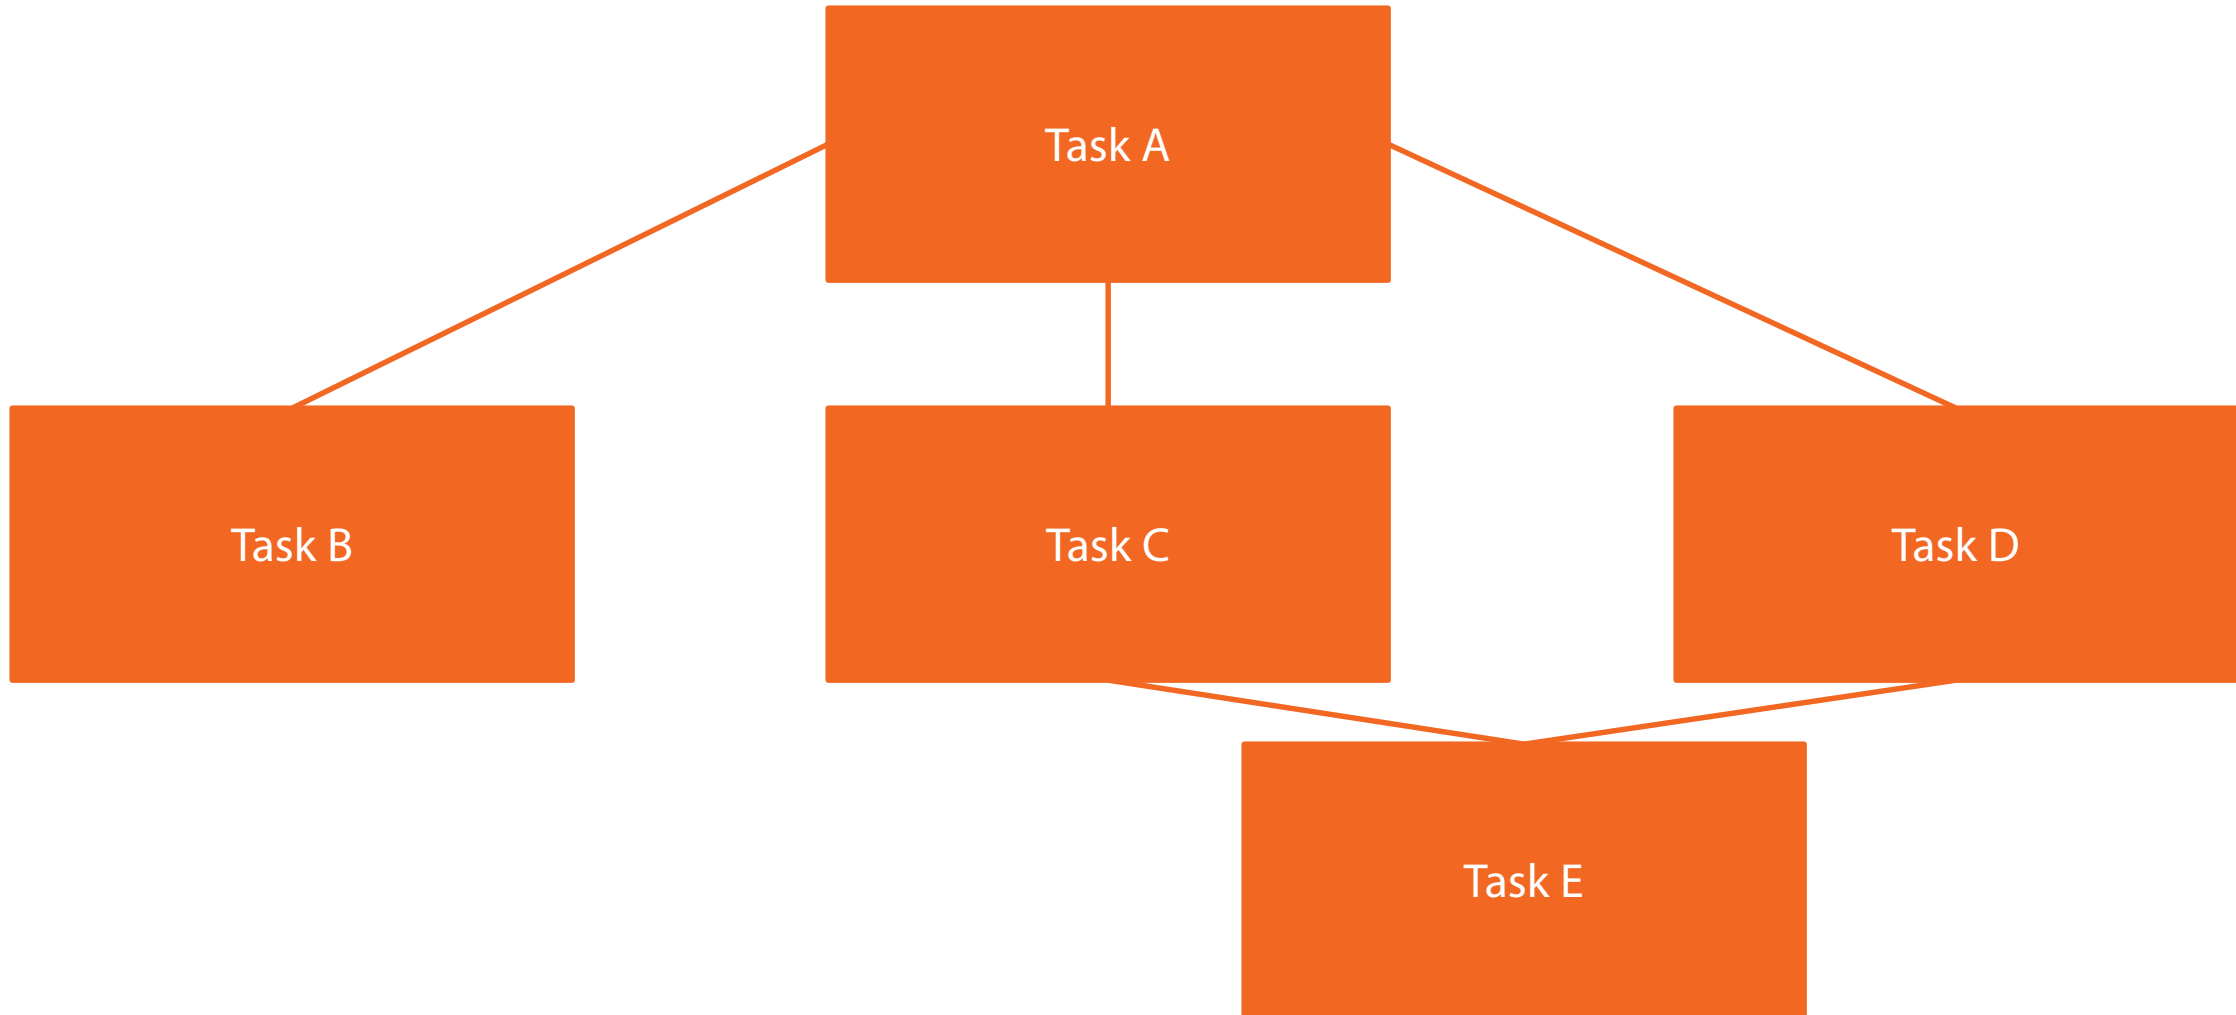

Objectives

- Understand how tasks can be linked

What Is a Task?

- Code that Gradle executes
 - Has a lifecycle
 - Has properties
 - Has 'actions'
 - Has dependencies

Task Dependencies

Other Dependencies

- `mustRunAfter`
 - If two tasks execute one **must** run after the other
- `shouldRunAfter`
 - If two tasks execute one **should** run after the other
 - This ignores circular dependencies
- `finalizedBy` (incubating in 2.6)
 - Inverted dependency
